

The capture of Ground Maintenance (GM) data into GIS enables the accurate calculation of the area and perimeter of all GM features.

## What are the benefits of Manual Data Capture?

Save your company time and money by outsourcing to specialist data team here at CentremapsLive.

## What are the benefits of Manual Data Capture?

Save your company time and money by outsourcing to specialist data team here at CentremapsLive.

The manual capture of ground maintenance data such as;

- Parking locations, including quantities and more
- EV Points; location of current and potential points for electric vehicles
- Bin stores; location and size of stores
- Playground areas; Size, equipment, type of flooring/ground
- Hard and green; such as concrete and grassed areas
- T-Marks; manually adding boundary responsibility
- Land registry; extracting data and mapping to overlay as appropriate
- Address data and geocoding; including parent/child data for flats, etc
- Property type; flat, masonette, house, etc

- and much more.

In addition to capturing the information, CentremapsLive can assist in the calculation of Ground Maintenance costs where appropriate; for example, per tenant / property.

## Can you work with our current datasets?

Yes, we can work with your current dataset. Whether this be updating, digitising or adding further layers of manually captured information.

## Do you work remotely or on site?

Either! Each client project is individual, we have experience in both extracting data from aerial imagery and other data sources or site visits. Both can be discussed upon application.
