

FURTHER INFORMATION TO ENHANCE SUSTAINABLE DRAINAGE ASSESSMENT.

We would like to obtain some further information from you, in order to enhance the SuDS Assessment.

Please email this form, along with any relevant plans and surveys for your Site to info@geosmartinfo.co.uk

PLEASE NOTE: Delays in receiving the answers to the questions below and relevant plans, may delay the delivery of your final report.

GeoSmart Question / Request	Developer response
Are there any preferred SuDS features that you would like to be included in the strategy?	
Are there any SuDS features that you wish to be excluded from the strategy?	
What is the existing impermeable area (m ²) – this will include buildings and any areas of hardstanding (concrete, tarmac etc.)?	
What is the proposed impermeable area (m ²) – this will include buildings and any areas of hardstanding (concrete, tarmac etc.)?	
Are you able to provide ground investigation data for the Site such as, depth to groundwater and infiltration test results?	
Are you able to provide any existing drainage details (e.g. drawings, CCTV drainage surveys etc.)?	

Do you know where surface water runoff currently discharges (public sewer, soakaway, stream) and where is this located?	
Are there any surface water features on-Site? <i>(How big are these, what is their condition?)</i>	
Who is likely to maintain the drainage network in the future?	

Please add any further notes in the box below about your existing and proposed development which you feel may be useful to include in the sustainable drainage assessment.
