

Code-Point is a postcode locator with postcode units in Great Britain and Northern Ireland. Get started with geographical analysis, simple route planning and asset management using Code-Point.

## What is Code Point?

Code-Point is a dataset that contains postcode units for Great Britain and Northern Ireland, each having a notional geographical location. Postcodes are an alphanumeric abbreviated form of an address. Postcode units are unique references and identify an average of 15 addresses. In some cases, where an address receives a substantial amount of mail, a postcode will apply to only one address and is defined as a large user postcode. The maximum number of addresses in a postcode is 100.

## Why use Code Point?

**Authoritative data;** Coverage of over 1.7 million postcodes in Great Britain and Northern Ireland updated quarterly – accurate depiction of all live postcodes in GB and NI.

**Get more from your postcode data;** Understand the split of residential and commercial delivery points within a postcode area for a greater depth of analysis.

**Interoperable data;** Combine your statistical and health datasets with postcode data by linking to ONS administrative codes and Health Authority codes provided with Code-Point.
